PERSONAL PROJECTS

Point of Sale Application (07/2022 - 08/2022)

- A PHP and MySQL-based POS system with Bootstrap for the front-end provides businesses with an efficient way to manage sales, inventory, and customer data. It streamlines the checkout process, reduces errors, and generates sales reports.

MERN Stack Blog Application (02/2023 - 03/2023)

- This blog platform is built using the MERN stack, featuring MongoDB for database management, Express for server-side logic, React for dynamic front-end user interfaces, and Node.js as the runtime environment. The application allows users to register, log in, create, and manage posts, as well as comment on existing posts. The front-end is styled using Tailwind CSS for a modern and responsive design. Image handling is efficiently managed through Multer, enabling users to upload and display images seamlessly.

CERTIFICATES

Full Stack Web dev (03/2024 - 06/2024)

Advance Javascript - Coursera (12/2021 - 02/2020)
